INTRODUCTION

PR-216

High Performance Personal Receiver

The PR-216 is a professional quality, personal monitor receiver designed to operate with transmitters in the 216-217 MHz band under Part 95 of the FCC regulations. This versatile receiver can tune both standard and high-fidelity channels for a variety of speciality applications: assistive listening, personal cueing, language interpretation, tour guide monitoring, and other personal remote monitoring applications.

The PR-216 receiver incorporates both advanced digital and analog micro-circuit technologies to produce superior audio performance with the convenience of channel-selectability to accommodate adverse multi-channel operation.

PR-216 CONTROLS

❶ AUDIO OUTPUT JACK: This stereo 3.5 mm audio output jack accommodates any low impedance headphone — either stereo or mono; also, charging input for rechargeable battery, and auxiliary power input.

❷ VOLUME CONTROL: This control has 50 dB of range to adjust the audio output for a comfortable listening level (clockwise for maximum level).

❸ POWER / RECEIVER STATUS INDICATOR:

The LED test indicator displays three functions:

1. The indicator will illuminate continuously when unit is “ON” and NO signal is being received.
2. A steady slow flash indicates the receiver is receiving a signal on the tuned channel.
3. A rapid flash of the LED indicator and a subtle beeping signal indicates a low battery.

❹ ON / OFF SWITCH: This switch turns the receiver on and off.

❺ OPTIONAL EnviroMic ON / OFF:

Note: If receiver does not have EnviroMic option, this switch is non-operational.

❻ CHANNEL SWITCHES:

These rotary switches select the channel. Channel must be the same as transmitter’s channel. (See page 6 for frequency selection chart.)

❼ BATTERY COMPARTMENT: The battery compartment features a hinged battery cover and an alignment system that ensures proper battery polarity. Battery installation and removal is facilitated by simply manipulating the rear of the battery.

PR-216 OPERATING INSTRUCTIONS

Setup

a. Check to ensure that the PR-216 receiver's radio frequency channel is the same as the associated COMTEK transmitter's channel.

(Channels are indicated by the rotary switches on the back of the receiver. See page 4.)

b. Open the battery cover on the receiver (see page 8) and insert a new nine volt alkaline battery (Eveready E522 or equivalent). This type of battery will offer up to 30 hours of operation. *(Replace the battery before every use if the demand for fail-safe operation outweighs battery cost. The use of carbon batteries is not recommended.)*

NOTE: If a rechargeable battery is to be used, ensure that the battery has a full charge before use. (See page 9 for battery charger instructions.)

c. Connect the headphone to the receiver by inserting the headphone plug into the receptacle on the top of the receiver. The receiver is operating when the receiver power switch is turned on and the battery status on indicator illuminates.

NOTE: The headphone cord also functions as part of the receiver's antenna system. For optimum performance, this cord should be fully extended. Coiling or bunching the headphone cord may reduce the range of the receiver. Also, coil-cord type headphone cords are *not* recommended. The receiver should be carried by the snap-on belt clip (included) or in a pocket or belt-clip pouch.

d. Set the audio output level control to a comfortable listening volume. This control is turned clockwise for maximum output level.

PR-216 OPERATING INSTRUCTIONS

Frequency Selection (216-217 MHz)

The PR-216 personal receiver can operate on one of 76 available channels between 216 MHz and 217 MHz. COMTEK's channel designations indicate both standard non-companded channels and high-fidelity, companded channels. Channels 1-40 are non-companded channels offering compatibility with other manufacturers. Channels 41-60 are high-fidelity, companded channels for use with COMTEK transmitters. Channels 61-79 are standard non-companded channels for compatibility with other manufacturers transmitters. COMTEK transmitters automatically transmit the proper mode when set to channels 1-40 for non-companded or 41-60 for companded channels.

After you have determined the channel on which you are going to operate, position the two rotary switches to indicate the channel. The left rotary switch is for *tens* and the right rotary switch is for *ones*. To select channel 41 (216.0250 MHz), position the left rotary switch to point to 4 (X10), and position the right rotary switch to point to 1 (X1). *Refer to frequency charts on pages 5 and 6 for selectable frequencies.*

Multiple Channel Operation

Simultaneous operation of more than two channels requires frequency coordination to avoid intermodulation interference. This interference could result in poor or unusable performance. When multiple transmitters are broadcasting, the RF signals will “mix” together generating additional signals. If these product frequencies are too close to a frequency which you are using, you will experience this type of interference. This condition is common to all radio receivers to some extent. This interference produces whistle and whine type sounds and/or reductions of range. **To avoid this type of interference, you should select frequencies from one of the standard groups (see frequency group charts on page 5), or you can use COMTEK's frequency selection guide software to determine appropriate frequencies.** Contact COMTEK to obtain a free copy of the frequency selection software or download it off the web at www.comtek.com/support.html

PR-216 OPERATING INSTRUCTIONS

Monitoring Capabilities

Because each monitoring application requires a different headphone or transducer to best satisfy each listening need, the PR-216 can source a strong audio signal (+16 dBu) to either stereo or mono headphones with an impedance as low as 16 ohm. A hearing-aid type button receiver may be used with impedances as high as 2 k ohm and still produce a strong audio signal.

The PR-216 is ideal for use with the COMTEK NTC-102 neckloop transducer and wireless IR-230 miniature universal-fit ear canal inductor receiver or hearing aids having a "T" switch.

Can be used with consumer or professional headphones.

Can be used with hearing aid button receiver for assistive listening or acoustic ear tube for IFB application.

Can be used to drive neckloop for use with IR-230 inductor receiver or hearing aids.

PR-216 OPERATING INSTRUCTIONS

Low Battery Indicator

The LED on the receiver is a multi-function indicator which includes low battery detection. When the receiver is first turned on, the indicator will illuminate continuously indicating that the unit is “ON” and NO signal is being received. When the receiver is receiving a signal on the tuned channel, the LED will show a steady slow flash indicating reception. A rapid flash on the LED indicator and a subtle beeping signal through the headphone indicates a low battery. Replace battery as soon as possible with a new alkaline battery or charge the rechargeable battery, as performance of the receiver will be unpredictable and may vary from audio distortion to complete failure to operate.

Battery Removal / Replacement

Pull back battery door latch and allow battery cover door to spring open. To remove battery, simply manipulate the bottom of battery out of the compartment and remove.

To insert battery, face battery with negative terminal in line with large hole in battery compartment, press battery into compartment and close battery door until it snaps shut. Note: It is not possible to put battery in backwards.

PR-216 OPERATING INSTRUCTIONS

Battery Charging

1. Make sure that a seven cell 9 volt Ni-MH rechargeable battery is used with a minimum of 200 mAh capacity. **(Alkaline batteries must not be charged.)**
2. Make sure the PR-216 is turned **OFF**.
3. Note that the red charging indicator on the charger is **ON** when the PR-216 is plugged into the charger through the audio output jack.
4. When using the NBC 9-2C charger allow the battery to charge for 14 hours for a full charge. Unit must then be unplugged. When using the NBC 9-3-1 digital fast charger the charger will automatically end the charge cycle and the red LED will change to green. With this charger the unit may be left in the charger until the unit is used.
5. Periodically open the battery compartment on stored COMTEK units to check for battery leakage. If a battery is leaking, it must be discarded, and the battery compartment must be cleaned or returned to COMTEK's service department for repairs.

2. NH 9-200 Rechargeable Ni-MH battery
3. P-1 Universal pouch
4. BC-216 Snap-on belt clip
(supplied with PR-216)
5. ET-4 SM-N Button receiver with acoustic ear tube
6. LS-3 High efficiency headphones
7. SM-N Button receiver earphone assembly
8. NTC-102 Neckloop transducer
(for use with inductor receiver IR-230)
9. NBC 9-3-1 Digital single fast charger
10. NBC 9-3-12 Digital 12-station fast charger

PR-216 SPECIFICATIONS

Audio Output:

Headset output +16 dBu
(low impedance)

Connector:

3.5 mm stereo/mono input used for:

- Headphone cord antenna to receiver
- Audio output to headphone
- Battery charger input
- Auxiliary power input

Indicators:

Three function LED

- Power
- Battery status
- R.F. signal ON and OFF

Controls:

- Power On/Off switch
- Volume control (50 dB range)
- EnviroMic ON/OFF switch (optional)
- 99-position rotary channel selector switches

Audio Frequency Response:

80 Hz to 12 kHz ± 3 dB

Harmonic Distortion:

Less than 1% (1 kHz tone 5 kHz deviation)

Operating Radio Frequency:

- 216 to 217 MHz
- Frequency synthesized

Frequency Stability:

0.002% frequency synthesized
crystal controlled

RF Sensitivity:

0.3 μ V for 12 dB SINAD

Adjacent Channel Rejection:

65 dB 50 kHz off channel

Spurious Rejection:

60 dB (image excluded)

Ultimate Quieting:

Better than 95 dB

Deviation Acceptance:

Up to 10 kHz

Antenna:

Integral with output cable
(no external antenna)

Current Drain:

18 mA nominal

Power Requirements:

9 volt alkaline battery,
Eveready 522 or equivalent
or 9 volt Ni-MH rechargeable

FCC Compliance:

Complies with Part 15
of FCC rules

Dimensions:

1 $\frac{1}{16}$ " x 2 $\frac{1}{2}$ " x 3 $\frac{1}{4}$ "
(27 mm x 57 mm x 83 mm)

change without notice

PR-216 WARRANTY AND SERVICE

Warranty

COMTEK transmitters and receivers are warranted to be free from defects in workmanship and material under normal stand-alone use and conditions for a period of **two years** from date of original purchase. Items such as headphones and earphones, neckloops, and cords are warranted to be free from defects in workmanship and material for a period of 90 days from the date of original purchase. Batteries are not covered by this warranty. Damage due to abnormal use, extreme conditions, misuse, use of the product as a component of another product, ill treatment and unauthorized modification and repairs are not covered by this warranty. COMTEK is not liable for any consequential or punitive damages arising out of any failure of the equipment to perform as intended. COMTEK shall bear no responsibility or obligation with respect to the manner of use of any equipment sold by it. COMTEK SPECIFICALLY DISCLAIMS AND NEGATES ANY WARRANTY OF MERCHANTABILITY OR FITNESS OF THE PRODUCT FOR A PARTICULAR PURPOSE INCLUDING, WITHOUT LIMITATION, ANY WARRANTY THAT THE USE OF SUCH EQUIPMENT FOR ANY PURPOSE WILL COMPLY WITH APPLICABLE LAWS AND REGULATIONS.

Service Policies

Warranty repairs must be done by COMTEK. Only factory technicians are authorized to perform warranty service on the PR-216 receiver. Before returning the PR-216 for service, a Return Authorization Number should be obtained from the service department by calling 1-800-496-3463 or 1-801-466-3463. Return the unit to the factory with the original or comparable packing. COMTEK will pay for insurance and ground return shipping costs in the United States for all warranty service.
